Client-Server Struktur

- NUnit
- Kommunikation mit Server

```
48 [Test]
49 public void Login()
50 {
51     var testLoginRequest = new Core.Connections.LoginRequest(
52         new Core.Models.Position(8108, 15),
53         "Maria",
54         "Musterfrau");
55     var testJson = JsonConvert.SerializeObject(testLoginRequest);
56
57     var testPackage = new Packet();
58
59     testPackage.Content = testJson;
60     testPackage.MethodType = MethodType.Login;
61
62     var client = new TcpClient();
63     client.Connect(
64         Client.Common.Constants.ClientConstants.TCP_SERVER,
65         Client.Common.Constants.ClientConstants.TCP_PORT);
66
67     Assert.True(client.Connected);
68
69     var testStream = client.GetStream();
70
71     testPackage.Send(testStream);
72
73     var testPackageIn = Packet.Receive(testStream);
74
75     client.Close();
76
77     Assert.True(!client.Connected);
78
79     var data = JsonConvert.DeserializeObject<Core.Connections.LoginResponse>(testPackageIn.Content);
80
81     Assert.AreEqual(Core.Connections.LoginResponse.ReponseStatus.OK, data.Status);
82     Assert.IsNotNull(data.Status);
83     Assert.IsNotNull(data.AccountId);
84 }
```
